1.1.5. Fluid that lubricates joints.

(5)

1.2. The diagram below shows the skeletal system of a frog.

1.2.1. Identify bones:

- i. A- _____
- ii. B- _____
- iii. G- _____ (3)

1.2.2. Write down the LETTER only of the part that represents the

- i. Ulna- _____
- ii. Tibia/ fibula- _____
- iii. Vertebra- _____ (3)

1.2.3. In comparison to body size, the bones in part D are longer than the same bones in a human.
Provide a possible explanation for this. (2)

[13]

Question 2

2.1. Study the diagram below and answer the questions that follow.

2.1.1. Provide a heading for the diagram above. (1)

2.1.2. Name the joint found at 9.
Why do you think this joint (9) has a deep socket? (2)

2.1.3. **On the diagram** above label another type of joint. (1)

2.1.4. The pelvis shown above is that of a male.
Give TWO differences between male and female hip bones. (2)

2.1.5. The femur is a long bone consisting of red and yellow marrow.
What is the function of red marrow?

(2)

2.1.6. In the space below sketch the typical structure of a long bone.

(5)

[13]

Question 3

Read the extract below and answer the questions that follow.

Tendinitis is the inflammation of tendons. The condition causes pain and tenderness just outside a joint.

Tendinitis can occur in any tendon. But it's most common around shoulders, elbows, wrists, knees and heels.

Tendinitis can be caused by a sudden injury. But repeating the same movement over time is a much more likely cause. Most people develop tendinitis because their jobs or hobbies involve motions that they repeat, over and over. This puts stress on tendons.

Moving correctly is especially important when having to repeat movements for sports or a job.
